SUMMARY

Full Stack Software Engineer with proven experience building scalable enterprise applications and consumer-facing platforms. Demonstrated expertise in architecting microservices following SOLID principles and clean architecture, while delivering end-to-end features from responsive frontend interfaces to robust backend APIs. Skilled at resolving critical production issues, optimizing cross-platform performance, and modernizing legacy codebases. Experience spans identity access management systems, social networking platforms, and cloud infrastructure management. Active competitive programmer with participation in online and offline competitions, strengthening algorithmic thinking and problem-solving skills. Currently building production web applications with Spring Boot and Next.js while developing side projects using NestJS and React Native. Stack-agnostic engineer eager to contribute to challenging projects, consistently bridging technical implementation with user experience to deliver maintainable, high-quality solutions.

EXPERIENCE

International Collegiate Programming Contest (ICPC) – Asia Topi Preliminary

- Participated in **International Collegiate Programming Contest (ICPC) – Asia Topi Online Round**
- **Sole representative team** from the university in the regional contest
- **Solved 3 algorithmic problems independently** under strict time constraints
- **Achieved an official rank** among participating regional teams

CALICO Berkeley Speed Coding

- Participated in **CALICO Berkeley Speed Coding Competition (2024)**
- **Solved 3 competitive programming problems** within limited time
- Demonstrated **strong problem-solving speed and algorithmic thinking**
- Competed against **international participants** in a high-pressure coding environment

Full Stack Engineer Present
Intimec Malaysia (Remote)

- Implemented comprehensive security architecture by integrating permissions service for **secure inter-service communication**, enforcing role-based access control ensuring users access only authorized tiles, and establishing proper validation flows for add-to-cart functionality maintaining data integrity
- Developed Access Portal Service microservice applying **SOLID principles** and clean architecture patterns, implementing service, repository, and mapper layers with clear separation of concerns, utilizing Dependency Inversion through interface-based design for DTO/controller abstraction, and integrating PostgreSQL database with proper layered architecture
- Built robust API Gateway integration with proper request routing, authentication flow validation, and header propagation (User-ID, Tenant-ID), while implementing **centralized exception handling** and comprehensive logging to enhance system traceability and API reliability

Full Stack Engineer Present
Digital Upgraders LLC United Arab Emirates

- Resolved multiple critical production issues including broken user approval workflows in admin panel, malfunctioning social media integrations, and URL sharing failures, while implementing robust validation layers across the stack to prevent duplicate data entries . Resolved critical cross-platform performance bottlenecks affecting mobile user experience on Android and iOS Safari browsers by optimizing rendering pipeline and input handling mechanisms, eliminating scrolling lag and ensuring smooth functionality across all devices
- Engineered comprehensive codebase modernization initiative by refactoring monolithic 3000-4000 line files into modular, maintainable architecture with custom hooks for validation logic (email, Instagram, phone, website) and reusable component patterns, significantly improving code maintainability and developer velocity
- Eliminated mobile experience degradation by identifying and resolving rendering performance issues causing input lag and scrolling problems on Android and iOS Safari, optimizing client-side execution to deliver consistent, responsive user experience across all mobile platform

AWARDS

Runner-up, App Development Hackathon (2025) May '25
Punjab University
Organized by Punjab University

Participant, Devathon Speed Programming Contest (2024) Oct '24
Devsinc
Organized by Devsinc

Participant, CALICO Berkeley Speed Coding Competition (2024) Dec '24
University of California, Berkeley

Organized by University of California, Berkeley

Ranked, ICPC Asia Topi Online Programming Contest (2024) Nov '24
International Collegiate Programming Contests
Organized by International Collegiate Programming Contests

PROJECTS

Cunocovo, Digital Upgraders LLC Jun — Present

- Social networking application where I executed critical production migration, decomposed 3000+ line monolithic files into maintainable modules, resolved mobile browser performance issues, and enhanced UX content across platform
- User engagement platform where I handled production deployments and DNS configuration, modernized code architecture with custom hooks, fixed cross-browser compatibility issues, and refined user interface messaging
- Community platform where I orchestrated infrastructure recovery, refactored codebase for modularity, optimized Android/iOS performance, and improved administrative functionality

Moodly- Experience Booking Platform Aug — Present

- Architected a real-time mood detection system using voice tone and facial expression analysis, powered by a RabbitMQ event-driven pipeline to dynamically personalize user experiences, significantly increasing satisfaction and retention.
- Built seamless booking and cancellation workflows with one-tap actions and instant confirmations, reducing transaction drop-off rates and streamlining user experience flow.
- Designed UI components that help users maintain their connection streaks, track mood changes, and visualize their mood journey over time, improving overall engagement and retention.
- Implemented voice-command interface enabling hosts to create and manage experiences hands-free, accelerating content onboarding with real-time backend synchronization via event-driven architecture.

Memingo - Language Learning Platform Sep '24 — Present

- Optimized leaderboard API performance by implementing Redis caching, reducing response time from 30 seconds to approximately 90ms and eliminating user drop-off to enable seamless real-time rankings
- Built a real-time object-detection module that identifies items and instantly delivers vocabulary, cultural context, and learning tips, transforming the app into a highly context-aware language learning experience
- Designed and built 9 interactive lesson formats for diverse learning styles, increasing course completion and improving long-term retention.
- Integrated a Gemini API-powered chatbot to provide personalized learning paths and resources, accelerating average learner progression

SKILLS

Languages Java, Javascript, SQL, TypeScript
Databases MySQL, MongoDB, SQ Lite, PostgreSQL, Supabase, Firebase
Development Tools Android Studio, VS Code, IntelliJ IDEA, Postman, Eclipse, Pycharm
Frontend & Mobile Next.js, React JS, TailwindCSS, Html, CSS, Shaden UI, React Native, Expo, Android SDK, Android
Version Control and DevOps Docker, AWS, AWS S3, AWS RDS, Git, Github
Backend Development Nest.js, Spring boot, Express.js, Next.js, Apache Kafka, RabbitMQ, Fast api, Cron Jobs, Node.js
Ai tools Gemini, Hugging Face, OpenAI
Competitive Programming Problem Solving, Divide And Conquer, DSA

EDUCATION

Bachelor's degree in Computer Science in Computer Science, University of Management and Technology - UMT Oct '21 — Aug '25
Lahore, Pakistan
