## SUMMARY

Frontend Developer with 1+ year of production experience building responsive and scalable web applications using React.js and Next.js. Delivered reusable component libraries, integrated REST APIs, and shipped modern user interfaces across a live social platform and an enterprise Identity Governance dashboard. Focused on maintainable architecture, cross-device performance, and production-quality UI engineering that directly impacts user experience.

## WORK EXPERIENCE

**Frontend Engineer** Dec '25 — Present
MicroTechX Remote
*Built and maintained production features for a social networking platform serving photographers, videographers, and creative professionals across web and mobile.*

- Redesigned the IAM web dashboard into a two-tab format with standardised design tokens and a unified theme system, eliminating visual inconsistency across the entire platform and improving UI maintainability.
- Resolved a QueryBuilder full re-render on every keystroke by replacing controlled state with useRef, adding a builderKey for controlled remounts, and preventing false dirty state on mount, eliminating input focus loss.
- Built a modular Add Role Wizard split into 5 tab components with identity-search owner selector, BadgeEditor, and CharacterCounter, reducing form complexity and improving content manager workflow efficiency.

**Frontend Engineer** Sep '25 — Jan '26
Digital Upgraders LLC Remote
*Built and maintained production frontend features for a social networking platform serving photographers, videographers, and creative professionals.*

- Refactored 3000+ line monolithic files into modular React.js and Next.js components with custom hooks for shared validation logic, reducing component coupling and cutting feature iteration time across the team.
- Resolved cross-platform rendering issues on Android and iOS Safari by identifying client-side execution bottlenecks causing scroll lag and input handling failures, delivering consistent user experience across all devices.
- Implemented gzip response compression on feed endpoints reducing payload size by 60–80%, cutting 100–200ms of transfer time and directly improving load performance for international users.

## PROJECTS

**Moodly- Experience Booking Platform** Link

- Built cross-platform mobile UI with one-tap booking flows and mood visualisation components consuming real-time AI inference REST APIs, delivering a seamless end-to-end booking experience.
- Implemented TypeScript-strict component architecture with input validation and clean state handling across booking lifecycle screens, reducing edge-case bugs in production.
- Designed voice-command interface for host experience creation with real-time backend synchronisation, reducing content onboarding time for hosts significantly.

**Memingo - Language Learning Platform** Link

- Built 9 interactive lesson format components covering multiple choice, fill-in-the-blank, and voice practice with a gamified leaderboard UI, increasing course completion and engagement metrics.
- Integrated an AI-powered chatbot for personalised learning path generation, handling session context and structured response formatting for consistent output quality across conversation turns.
- Built real-time object detection vocabulary interface that identifies physical items and delivers contextual learning tips instantly, transforming the camera into an active learning surface.

## SKILLS

**Programming Languages** Javascript, TypeScript, Html5, CSS3
**Frontend** React JS, TailwindCSS, Shadcn UI, Next.js, Framer Motion, Javascript
**Backend** Node.js, Spring Boot, Express.js, Nest.js
**Version Control** Github, Git

## AWARDS

**Runner-up, App Development Hackathon (2025)** May '25
Organized by Punjab University

**Ranked, ICPC Asia Topi Online Programming Contest (2024)** Nov '24
Organized by International Collegiate Programming Contests

## EDUCA

## TION

**Bachelor's degree in Computer Science**, University of Management and Technology - UMT Oct '21 — Aug '25
