WORK EXPERIENCE

Full Stack Engineer Present

MicroxTech Malaysia (Remote)

- **Designed and implemented an Access Portal for Identity & Access Management**, covering tile-based access requests, role targeting, department scoping, and request lifecycle management.
- **Implemented Kafka-based asynchronous event processing** for audit and background workflows, including event validation to prevent invalid payload propagation.
- **Implemented dynamic UI authorization**, ensuring tiles, actions, and dialogs render conditionally based on role permissions and backend enforcement.
- **Implemented end-to-end role-based access control (RBAC)** across UI and APIs, ensuring users can only view, request, and act on tiles permitted by their assigned roles.
- **Added centralized exception handling and unified logging**, improving API reliability, debuggability, and traceability across access, cart, and request flows.
- **Resolved a critical Multi-Bag-Fetch-Exception** by refactoring conflicting entity fetch strategies, stabilizing request detail APIs and improving system reliability.

Full Stack Engineer Present

Digital Upgraders LLC United Arab Emirates (Remote)

- **Resolved multiple critical production issues** including broken user approval workflows in admin panel, malfunctioning social media integrations, and URL sharing failures, while implementing robust validation layers across the stack to prevent duplicate data entries
- **Resolved critical cross-platform performance bottlenecks** affecting mobile user experience on Android and iOS Safari browsers by optimizing rendering pipeline and input handling mechanisms, eliminating scrolling lag and ensuring smooth functionality across all devices
- **Engineered comprehensive codebase modernization initiative** by refactoring monolithic files into modular, maintainable architecture with custom hooks for validation logic (email, Instagram, phone, website) and reusable component patterns, significantly improving code maintainability and developer velocity
- **Eliminated mobile experience degradation** by identifying and resolving rendering performance issues causing input lag and scrolling problems on Android and iOS Safari, optimizing client-side execution to deliver consistent, responsive user experience across all mobile platform

PROJECTS

Cunocovo, Digital Upgraders LLC Link Jun — Present

- Social networking application where I executed critical production migration, decomposed 3000+ line monolithic files into maintainable modules, resolved mobile browser performance issues, and enhanced UX content across platform
- User engagement platform where I handled production deployments and DNS configuration, modernized code architecture with custom hooks, fixed cross-browser compatibility issues, and refined user interface messaging
- Community platform where I orchestrated infrastructure recovery, refactored codebase for modularity, optimized Android/iOS performance, and improved administrative functionality

Moodly- Experience Booking Platform Link Aug '25 — Present

- Architected a real-time mood detection system using voice tone and facial expression analysis, powered by a RabbitMQ event-driven pipeline to dynamically personalize user experiences, significantly increasing satisfaction and retention.
- Built seamless booking and cancellation workflows with one-tap actions and instant confirmations, reducing transaction drop-off rates and streamlining user experience flow.
- Designed UI components that help users maintain their connection streaks, track mood changes, and visualize their mood journey over time, improving overall engagement and retention.
- Implemented voice-command interface enabling hosts to create and manage experiences hands-free, accelerating content onboarding with real-time backend synchronization via event-driven architecture.

Memingo - Language Learning Platform Link Sep '24 — Present

- Optimized leaderboard API performance by implementing **Redis caching**, reducing response time from 30 seconds to approximately 90ms and eliminating user drop-off to enable seamless real-time rankings
- Built a real-time object-detection module that identifies items and instantly delivers vocabulary, cultural context, and learning tips, transforming the app into a highly context-aware language learning experience
- Designed and built 9 interactive lesson formats for diverse learning styles, increasing course completion and improving long-term retention.

- Integrated a **Gemini API-powered chatbot** to provide personalized learning paths and resources, accelerating average learner progression

SKILLS

Programming Languages Javascript, TypeScript, SQL, Java
Backend Spring Boot, Node.js, Nest, Express.js, Mongoose, Fast Api, Flask, Microservices, Next.js
Databases MySQL, MongoDB, SQ Lite, PostgreSQL, Supabase
Development Tools Android Studio, VS Code, IntelliJ IDEA, Postman, Eclipse, Pycharm
Frontend Html, CSS, React JS, TailwindCSS, Shadcn UI, Next.js
Version Control Github, Git
AI & Third Party Servcies Swagger, Stripe, Open Ai, Gemini, Hugging Face Models
Mobile App Development React Native, Expo, Android SDK, Android
Cloud & DevOps Docker, RabbitMQ, Firebase, AWS, AWS S3, AWS RDS

CERTIFICATIONS

Master Microservices with SpringBoot, Docker, Kubernetes, Udemy — May '25

AWARDS

Runner-up, App Development Hackathon (2025) — May '25
Organized by Punjab University

Participant, Devathon Speed Programming Contest (2024) — Oct '24
Organized by Devsinc

Participant, CALICO Berkeley Speed Coding Competition (2024) — Dec '24
University of California, Berkeley

Ranked, ICPC Asia Topi Online Programming Contest (2024) — Nov '24
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology - UMT — Oct '21 — Aug '25, Lahore, Pakistan
