Muhammad Talha Atif

Java Full Stack Engineer

+923064391520 ◇ talhaatif573@gmail.com ◇ Lahore, Pakistan ◇ LinkedIn ◇ GitHub ◇ Portfolio

SUMMARY

Java Full Stack Engineer with 1+ year of production experience building enterprise backend systems, distributed microservices, and React/Next.js web platforms. Led architectural decisions for a distributed IAM platform, designed event-driven workflows, enforced security patterns, and drove engineering quality through code reviews and team-aligned delivery in Agile sprints. Comfortable communicating technical trade-offs and design decisions to both technical and non-technical stakeholders.

WORK EXPERIENCE

Full Stack Engineer Present
MicroTechX Remote
Full Stack Java Engineer developing enterprise IAM features in a microservices architecture using Spring Boot, Next.js, Kafka, PostgreSQL, and Dgraph.

- Architected event-driven microservices for IAM audit trails and approval orchestration across 8+ services, configuring consumer concurrency, retry windows, and dead-letter queues to ensure fault-tolerant message processing.
- Implemented inter-service communication for user identity and manager resolution; refactored an access-request lookup that eliminated a critical performance bottleneck in the role-assignment approval flow.
- Designed a bulk role assignment API supporting 5,000+ users in a single operation using batch queries, keeping assignment time flat regardless of payload size and eliminating the timeout failures that occurred with the previous approach.

Full Stack Engineer Sep '25 — Jan '26
Digital Upgraders LLC Remote
Built and maintained production features for a social networking platform serving photographers, videographers, and creative professionals across web and mobile.

- Optimised feed loading from 3 seconds to 700ms by combining selective indexing on read-heavy columns, query optimisation, DTO cleanup, and a 5-minute in-memory post cache addressing performance at every layer of the stack.
- Implemented rate limiting on authentication and high-frequency endpoints, session management, and structured audit logging enforcing secure access patterns across all service layers.
- Diagnosed and resolved persistent production bugs across auth validation, notification lifecycle, cache invalidation, and protected route enforcement, validating all fixes against multi-scenario edge cases before deployment.

PROJECTS

Moodly- Experience Booking Platform Link Aug '25 — Present

- Designed the full audio preprocessing pipeline handling file validation, stereo-to-mono conversion, and resampling before feeding audio into the emotion classification model, covering the edge cases that cause silent inference failures in production.
- Built structured API endpoints with typed error responses, automatic temp file cleanup, and a separate text embedding endpoint keeping the inference service reliable and straightforward to integrate from the frontend.
- Designed event-driven workers for async mood processing and booking state transitions, decoupling the inference layer from the booking service to keep API response times consistent under model load.

Memingo - Language Learning Platform Link Sep '24 — Present

- Optimized leaderboard API performance by implementing Redis caching, reducing response time from 30 seconds to approximately 90ms and eliminating user drop-off to enable seamless real-time rankings
- Built a real-time object-detection module that identifies items and instantly delivers vocabulary, cultural context, and learning tips, transforming the app into a highly context-aware language learning experience
- Integrated an AI-powered chatbot for personalised learning path generation, handling session context and structured response formatting for consistent output quality across conversation turns.

SKILLS

Programming Languages SQL, Java, Python, Javascript, TypeScript
Backend Spring Boot, Microservices
Frontend Html, CSS, React JS, TailwindCSS, Shadcn UI, Next.js
Databases MySQL, MongoDB, SQ Lite, PostgreSQL, Supabase, MariaDB, Redis
Development Tools Android Studio, VS Code, IntelliJ IDEA, Postman, Eclipse, Pycharm
Version Control Github, Git
AI & Third Party Servcies Swagger, Stripe, Open Ai, Gemini, Hugging Face Models
Cloud Firebase, AWS, Dokploy, Redis

DevOps CI/CD pipelines, Github Actions, Docker, Kubernetes
Messaging Apache Kafka, RabbitMQ, WebSockets

CERTIFICATIONS

Master Microservices with SpringBoot, Docker, Kubernetes, Udemy — May '25

AWARDS

Runner-up, App Development Hackathon (2025) — May '25
Organized by Punjab University

Participant, CALICO Berkeley Speed Coding Competition (2024) — Dec '24
University of California, Berkeley

Ranked, ICPC Asia Topi Online Programming Contest (2024) — Nov '24
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology - UMT — Oct '21 — Aug '25
Lahore, Pakistan
