github.com/Sheryar-Ahmed

Full Stack Engineer with 2+ years of experience building scalable web and mobile applications using **React, React Native, Node.js, and MongoDB**. Skilled in developing clean, efficient code across both frontend and backend, integrating third-party APIs, managing databases, and deploying to cloud platforms like AWS and GCP. Strong focus on **performance, security**, and **user experience**, with hands-on experience in CI/CD, containerization, and cross-platform development.

WORK EXPERIENCE

Full Stack Engineer
Appsologix

06/2024 - Present *Remote, Full Tme*

Projects/Achievements

- HealthSIA | *React.js, Node.js, MySQL, GCP Aug 2024 – Apr 2025.*
- Developed a perioperative care platform for 5,000+ users with secure REST APIs and a responsive admin panel using React & Next.js. Enabled role-based dashboards, MEAL/exercise tracking, and real-time chat between patients, therapists, and surgeons. Led backend CI/CD integration, reducing API response time by 40%.
- Peepskill | *React.js, Node.js, MySQL, Docker, GCP Nov 2024 – Mar 2025.*
- Built a social platform for 2,000+ users with media feeds, nested comments, and RBAC, delivering a functional MVP in 6 weeks. Designed scalable APIs, optimized DB performance (–35% query load), and deployed via Docker on GCP, improving UX.
- Royal Vision Dubai | *React.js, Node.js, MySQL, GCP, CCAvenue Mar 2025 – Jun 2025.*
- Engineered a complete travel and vision care booking platform, including 25+ modules (tours, bookings, coupons, reviews, SEO). Integrated CCAvenue for multi-currency payments and implemented age-based dynamic pricing logic. Automated email notifications via SMTP, enhanced SEO by 40%, and improved reporting speed by 50%.

Full Stack Engineer
Oqvest New Jersey, USA.

06/2023 - 10/2023 *Remote, Full Time*

Projects/Achievements

- Built and maintained backend for oqvesthomeloans.com using Node.js, Express, MySQL, and Sequelize.
- Designed scalable database schemas and integrated third-party services including Plaid and credit score APIs. Also contributed to the backends of **Oqteq** , **_Oqvic** , and managed routing logic across services under the Oqvest ecosystem.
- Deployed 5–6 backend services behind an NGINX reverse proxy on a single DigitalOcean droplet, managing domain configuration and SSL setup.

EDUCATION

Bachelors in Computer Science
University of Education

SKILLS

Frontend: React.js, PWA, Next.js, JavaScript (ES6+), TypeScript, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Nest.js, Express.js, Microservices Architecture, RESTful APIs, Graphql, MySQL, MongoDB, PostgreSQL, Socket.io

DevOps & Tools: Docker, Jenkins, Nginx, Git, GitHub, CI/CD Pipelines, AWS services

Testing & Debugging: Postman, Jest, Chrome DevTools

Other: Agile/Scrum, API Integration, MVC Architecture, System Design

PROJECTS

Doorcut (04/2024 - 08/2024)

- **Built a role-based mobile app** in **React Native** for barbers and customers, enabling profile management, service browsing, gallery uploads, and booking workflows, each with tailored user flows.
- **Developed scalable backend APIs** using **Node.js** and **Express**, covering OTP-based authentication, chat system, service listings, working hours, and media handling for galleries and packages.
- **Integrated Firebase Cloud Messaging (FCM)** for push notifications and structured the mobile codebase using modular components, reusable hooks, and centralized context for role-based access control.

Bebo (Live Streaming App) (01/2024 - 05/2024)

- Developed backend and 3 admin panels for Bebo, a TikTok-style live streaming platform with 7 user roles. Integrated live socket features for real-time gift sharing and in-stream interactions.
- Integrated a third-party multiplayer gaming module using SudTechnology, enhancing viewer engagement. Built scalable APIs, role-based access controls, and led deployment and documentation.
- Collaborated with a Java-based mobile dev and gained deep experience in real-time systems and modular platform design.

ACHIEVEMENTS

Solved 490+ LeetCode problems across key patterns: sliding window, two pointers, binary search, linked list, DP, and more

Delivered production-grade healthcare system used across multiple hospitals

Integrated CI/CD pipelines across AWS + Docker infrastructure for faster, more reliable, and automated releases

Mentored junior developers and led feature architecture
