SUMMARY

Backend-anchored Product Engineer with 2+ years of production experience owning features end to end from the service layer through operational UI to the screen users interact with. Shipped correctness-critical Spring Boot services across a compliance-heavy IAM platform (8+ JVM microservices, Kafka event pipelines, ACID transactional guarantees), built and maintained Next.js dashboards and admin tooling, and delivered cross-platform mobile experiences with React Native and Flutter. Ship with AI coding agents daily as a core part of the engineering workflow, not an occasional tool. Comfortable in small, high-autonomy teams where every engineer owns real surface area and makes product calls directly.

WORK EXPERIENCE

Product Engineer *Dec '25 – Jun '26*
Intimec via MicroTechX Remote

Owned product slices end to end across JVM backend services, Next.js operational tooling, and frontend interfaces on a compliance-heavy Identity Governance platform where correctness and auditability were non-negotiable.

- Owned the Access Portal end to end: designed the service layer handling request lifecycle state transitions, built the Next.js admin and operational UI for approvals and moderation, and shipped the user-facing dashboard, making product trade-offs directly with the CEO in a team of three.
- Built correctness-critical Spring Boot services with ACID transactional guarantees and automatic rollback, Kafka event pipelines with dead-letter queue recovery, and a generic rule-based engine automating policy evaluation on identities, treating every edge case around user data and access decisions with the same care fintech systems require.
- Migrated inter-service communication from REST to gRPC reducing latency by 50%, refactored audit infrastructure to be PII-free for compliance, and resolved a Spring AOP proxy bypass that was silently dropping audit events on critical methods.
- Authored RFCs and onboarding documentation covering service boundaries, API contracts, environment setup, and seed test data from scratch for a previously undocumented codebase, setting the engineering standard for how decisions and trade-offs are recorded.
- Shipped every feature using Claude and GitHub Copilot as daily workflow tools for code generation, review acceleration, and pattern scaffolding, while owning all architectural decisions and debugging independently.

Product Engineer *Sep '25 – Jan '26*
Digital Upgraders LLC Remote

Shipped full stack features end to end on a production social platform, owning backend services, Next.js frontend, and infrastructure with no separate team to hand off to.

- Cut feed load time from 3s to 700ms by diagnosing bottlenecks across query structure, indexing, payload, and caching, then fixing each layer independently rather than waiting for a spec or handing off to another team.
- Led zero-downtime infrastructure migration from AWS to Fly.io, reworking Docker, CI/CD, DNS, and service configuration on a live platform, owning every layer of the migration from database region to email provider cutover.
- Resolved cross-platform rendering failures on Android, iOS, and Safari by tracing client-side execution bottlenecks and restoring consistent behaviour without a design system change.

PROJECTS

Moodly | AI Experience Booking Platform | Demo

- Owned the entire product end to end: NestJS backend services, FastAPI AI inference pipeline, React Native mobile app, and AWS deployment. Made every product and architecture decision solo, from data model through user-facing screens.
- Built async RabbitMQ pipeline decoupling AI inference from the booking engine, with retry logic and graceful partial failure handling, reducing perceived wait time from 4-8 seconds to under 1 second.

Memingo | Language Learning Platform | Demo

- Replaced per-request leaderboard computation with precomputed Redis cache, reducing API response from 30 seconds to 90ms.
- Integrated Gemini API with session-aware context and structured output parsing for personalised learning recommendations across sessions.

SKILLS

Backend (primary) Java, Spring Boot, Spring Security, Spring AOP, Kotlin (transferable), Node.js, NestJS, FastAPI, Python

Frontend Next.js, React.js, TypeScript, Tailwind CSS, Shadcn UI

Mobile React Native (Expo), Flutter (familiar), Android Native (Kotlin, Jetpack Compose)

Architecture Microservices, event-driven, Kafka, RabbitMQ, gRPC, WebSockets, ACID transactional design

Data PostgreSQL, MySQL, MongoDB, Redis, OpenSearch, Supabase, Firebase

Auth OAuth 2.0, JWT, RBAC, Spring Security, secure credential handling

Infra AWS (S3, RDS, EC2), Docker, GitHub Actions, CI/CD, Terraform (familiar), Fly.io, Dokploy

AI Workflow Claude, GitHub Copilot, Gemini API, Hugging Face, LangChain, daily AI-assisted engineering

OPEN SOURCE

4 merged PRs across 2 Apache-scale open source projects

Apache Checkstyle PR #18807 JVM static analysis tool used across thousands of production Java projects globally

OpenSRE PR #3702 | PR #3620 | PR #3618 3 contributions to Tracer Cloud's open source site reliability engineering platform

AWARDS

Runner-up, App Development Hackathon 2025 *May '25*
Punjab University

Ranked, ICPC Asia Topi Online Programming Contest 2024 *Nov '24*
International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology, UMT *Oct '21 – Aug '25*
