SUMMARY

Java Developer with 2+ years of experience building production-grade Spring Boot microservices, RESTful APIs, and distributed backend systems. Delivered a compliance-heavy enterprise IAM platform spanning 8+ Java microservices with Kafka event pipelines, Spring Security RBAC, Hibernate/JPA, and PostgreSQL at scale. Strong foundation in object-oriented design, API architecture, and performance optimisation with measurable production results. Immediate availability, personal laptop, and stable internet connection.

WORK EXPERIENCE

Java Developer *Dec '25 – Present*
Intimec via MicroTechX Remote

Designed and built Java Spring Boot microservices for an enterprise Identity Governance platform, owning REST API design, Kafka event pipelines, Spring Security, Hibernate/JPA, and PostgreSQL schema across a distributed compliance system.

- Designed and implemented RESTful APIs using Java, Spring Boot, and Spring MVC for tile management, cart operations, access requests, and bulk role assignment, following clean controller/service/repository architecture throughout.
- Architected Kafka-based event-driven microservices for IAM audit trails and approval workflows across 8+ distributed Spring Boot services, configuring consumer concurrency, retry windows, and dead-letter queues for fault-tolerant async processing.
- Enforced Spring Security authentication, JWT validation, and RBAC access control across all service endpoints, integrated gRPC inter-service communication for identity resolution, and wrote JUnit unit and integration tests for all critical modules.
- Led zero-downtime OpenSearch migration reindexing 5M+ documents via index templates and alias switching, and designed bulk role assignment API supporting 5,000+ users per operation using batch queries with flat latency at scale.

Full Stack Developer *Sep '25 – Jan '26*
Digital Upgraders LLC Remote

Built and maintained Node.js REST APIs and React frontend features for a production social platform, applying Java-consistent layered architecture and OOP design patterns throughout the backend codebase.

- Resolved a feed API performance bottleneck by adding selective database indexes, removing unused DTO fields, optimising queries, and adding a 5-minute in-memory cache, reducing response time from 3 seconds to 700ms under production load.
- Fixed a notification duplication bug by replacing non-transactional query patterns with proper database transactions, eliminating the race condition causing duplicate writes under concurrent user load.
- Led zero-downtime production migration to Fly.io covering Docker configuration, DNS, Supabase, and environment setup across a live multi-service platform.

PROJECTS

TickoJet | Event Booking System | Demo

- Built a Java Spring Boot REST API backend with Spring MVC controllers, Hibernate/JPA for MySQL relational data persistence, and Redis caching for high-frequency availability queries, packaged with Maven and containerised with Docker.
- Paired with a native Android MVVM client in Kotlin consuming the Spring Boot REST APIs end to end for ticket booking, seat selection, and cancellation workflows.

Memingo | Language Learning Platform | Demo

- Resolved a critical leaderboard bottleneck by replacing per-request ranking computation with a Redis precomputed cache, reducing API response from 30 seconds to 90ms and eliminating user drop-off on the rankings screen.
- Deployed backend services to AWS (S3, RDS), containerised with Docker, and configured GitHub Actions CI/CD pipelines for automated build, test, and deployment.

SKILLS

Core Java Java, OOP, Design Patterns, Collections, Generics, Multithreading

Spring Ecosystem Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, Maven

APIs RESTful APIs, gRPC, Microservices Architecture, API Gateway, Swagger/OpenAPI

Messaging Apache Kafka, RabbitMQ, event-driven architecture, WebSockets

Databases PostgreSQL, MySQL, MongoDB, Redis, SQLite, Supabase, Firebase, OpenSearch

Security JWT, OAuth 2.0, RBAC, Spring Security, rate limiting, input validation

Cloud / DevOps AWS (S3, RDS, EC2), Docker, GitHub Actions, CI/CD, Maven, Git

Frontend (familiar) React.js, Next.js, TypeScript, Node.js, Express.js

OPEN SOURCE

Apache Checkstyle github.com/checkstyle/checkstyle/pull/18807
Merged contribution to Apache-maintained Java static analysis tool used by thousands of enterprise Java projects globally.

AWARDS

Runner-up, App Development Hackathon (2025) *May '25*
Organized by Punjab University

Ranked, ICPC Asia Topi Online Programming Contest (2024) *Nov '24*
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology – UMT *Oct '21 – Aug '25*
