SUMMARY

Full Stack Developer with 1+ year of production experience building end-to-end web applications using React on the frontend and Java Spring Boot microservices on the backend. Delivered compliance-heavy IAM systems with fine-grained RBAC, audit logging, and policy enforcement across distributed services. Hands-on with AI-augmented development workflows using GitHub Copilot, Claude AI, and Gemini APIs in real project delivery. Strong end-to-end ownership mentality across requirements, design, implementation, testing, and post-launch maintenance. Experienced collaborating across distributed, cross-timezone remote teams with clear async communication and proactive stakeholder alignment.

WORK EXPERIENCE

Full Stack Developer *Dec '25 – Present*
MicroTechX Remote

Built and owned full stack features for an enterprise IAM compliance platform, delivering React/Next.js frontends, Java Spring Boot microservices, RESTful APIs, and audit systems from requirements through deployment and post-launch maintenance.

- Designed and delivered an entitlement rule engine with grouped conditions, IMMEDIATE, CRON, MANUAL, and ONE_TIME schedulers, and a post-commit TransactionalEventListener for safe rule evaluation, enforcing compliance policy across all production identities.
- Built Kafka-based event-driven microservices for IAM audit trails and approval workflows across 8+ distributed Java services, configuring consumer concurrency, dead-letter queues, and retry windows for fault-tolerant real-time event processing at scale.
- Implemented Spring Security authentication, JWT validation, and fine-grained RBAC across all service endpoints, and led a zero-downtime OpenSearch migration reindexing 5M+ documents to restore analytics reliability in production.

Full Stack Developer *Sep '25 – Jan '26*
Digital Upgraders LLC Remote

Delivered full stack features for a production social platform, owning REST API design, React frontend components, PostgreSQL schema, and AWS infrastructure across a distributed remote team.

- Built content moderation and reporting systems end to end including PostgreSQL schema, REST APIs with ranking logic, and React admin dashboard, enforcing duplicate-report prevention and edge-case validation across all API surfaces.
- Resolved a feed API performance bottleneck by tracing the issue across database indexes, query structure, DTO payload, and caching layer, reducing response time from 3 seconds to 700ms through targeted optimisations at each layer.
- Led zero-downtime production migration covering Docker, DNS, Supabase, and AWS-backed infrastructure, communicating progress and risks to stakeholders throughout the transition across a distributed remote team.

PROJECTS

Moodly | AI Experience Booking Platform | Demo

- Built Python FastAPI AI inference service integrating Hugging Face models and Gemini API for multimodal emotion detection, with an async event pipeline and a React Native frontend, leveraging Claude AI and GitHub Copilot throughout development.
- Designed RESTful APIs for the full booking lifecycle with JWT authentication, strict input validation, and unit-tested business logic, owning the feature end to end from data model to production deployment.

Memingo | Language Learning Platform | Demo

- Resolved a leaderboard bottleneck by replacing per-request computation with a Redis precomputed cache, reducing API response from 30 seconds to 90ms and eliminating user drop-off on the rankings screen.

- Integrated an AI chatbot with session-aware context management and structured output parsing using Gemini API, and built 9 interactive React Native lesson components with a real-time object detection vocabulary module.

SKILLS

Frontend React.js, Next.js, React Native, Vue.js (familiar), TypeScript, JavaScript, Tailwind CSS, Shadcn UI

Backend Java, Spring Boot, Spring MVC, Spring Security, Node.js, Express.js, NestJS, FastAPI, REST APIs

Databases PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase, Hibernate/JPA, OpenSearch

Architecture Microservices, Kafka, event-driven, distributed systems, RBAC, audit logging, compliance systems

AI Tools GitHub Copilot, Claude AI (Code + Chat), Gemini API, OpenAI API, Hugging Face

Cloud / DevOps AWS (S3, RDS, EC2), Docker, GitHub Actions, CI/CD, Maven, Fly.io

Security JWT, OAuth 2.0, RBAC, rate limiting, Spring Security, input validation

AWARDS

Runner-up, App Development Hackathon (2025) *May '25*
Organized by Punjab University

Ranked, ICPC Asia Topi Online Programming Contest (2024) *Nov '24*
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology – UMT *Oct '21 – Aug '25*
