SUMMARY

Full Stack Engineer with 2+ years of experience building and iterating on production web and mobile applications. Delivered user-facing features end to end across React, Next.js, and Node.js platforms, improving feed performance from 3 seconds to 700ms and shipping content systems used by real users daily. Product-minded and self-directed: I take ownership from concept through measurement, collaborate directly with non-engineering stakeholders, and hold myself to a high standard on both code quality and user experience. Comfortable working autonomously in small, fast-moving teams where every person's work has direct product impact.

WORK EXPERIENCE

Full Stack Engineer *Dec '25 – Present*
MicroTechX Remote

Took full product ownership of an IAM self-service portal, iterating on user flows, improving activation patterns, and shipping features that directly changed how users experience access management end to end.

- Owned the full redesign of the access request user flow, replacing fragmented modal workflows with a streamlined sheet-based interface and standardised design tokens, directly improving task completion and reducing user confusion across the portal.
- Identified and fixed a critical production crash on the task management page caused by unchecked nullable properties, and proactively refactored 50+ component files to standardise UI patterns without being asked, improving consistency across the platform.
- Built workflow analytics with 8 KPI drilldown types and time-window filtering, and resolved a QueryBuilder full re-render on every keystroke by replacing controlled state with useRef, eliminating input lag and improving the editing experience.

Full Stack Engineer *Sep '25 – Jan '26*
Digital Upgraders LLC Remote

Shipped and iterated on user-facing features for a production social platform for creative professionals, improving key interaction flows and resolving issues that were degrading the user experience across web and mobile.

- Eliminated a 2-second comment button latency by tracing the issue to a redundant backend pre-check and removing it, bringing response time to 0ms and directly improving one of the platform's highest-frequency user interactions.
- Optimised feed loading from 3 seconds to 700ms through indexing, query optimisation, DTO cleanup, and a 5-minute in-memory cache, improving the core content discovery experience that drives daily user activation.
- Fixed a notification duplication bug and resolved cross-platform rendering issues on Android and iOS Safari that were causing scroll lag, restoring a consistent and reliable experience across all devices.

Android Developer (Freelance) *2024 – Present*
Independent Clients Remote

Delivered 10+ production Android applications independently for paying clients, owning full project lifecycle from requirements through Play Store submission.

- Built a plant care app with Gemini API integration for plant identification and a custom ML model for weather-based care predictions, and a recipe app with AI-powered generation, bookmarking, and QR code sharing, both shipped to real users.
- Managed end-to-end client relationships across 2+ years, iterating on delivered apps based on user feedback with two apps published on Google Play with 100-200 downloads combined.

PROJECTS

Moodly | AI Experience Booking Platform | Demo

- Designed and shipped the full booking experience end to end: multimodal AI mood detection, one-tap booking flows, host voice-command interface, and real-time event synchronisation, built and iterated independently from concept to production.
- Held the entire system to a high standard: typed API contracts, unit-tested business logic, secure auth, and TypeScript-strict frontend components across every layer.

Memingo | Language Learning Platform | Demo

- Identified and resolved a leaderboard bottleneck reducing response from 30 seconds to 90ms, and built 9 interactive lesson formats with a real-time object detection vocabulary module that turns the camera into a learning surface.
- Integrated an AI chatbot with session-aware context delivering personalised learning paths, shipped as a complete product independently from backend to mobile UI.

SKILLS

Frontend React.js, Next.js, React Native, TypeScript, JavaScript, Tailwind CSS, Shadcn UI, Framer Motion

Backend Node.js, Express.js, NestJS, Java, Spring Boot, FastAPI, Python, REST APIs

Databases PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase

AI Tools GitHub Copilot, Claude AI, Gemini API, OpenAI API, Hugging Face

Cloud / DevOps AWS (S3, RDS), Docker, GitHub Actions, CI/CD, Fly.io

AWARDS

Runner-up, App Development Hackathon (2025) *May '25*
Organized by Punjab University

Ranked, ICPC Asia Topi Online Programming Contest (2024) *Nov '24*
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology – UMT *Oct '21 – Aug '25*
